

1. **Date:** This column represents the date of the trading day.
2. **Open:** Refers to the price at which the first trade occurred at the beginning of the trading day.
3. **High:** Represents the highest price at which the stock traded during the trading day.
4. **Low:** Denotes the lowest price at which the stock traded during the trading day.
5. **Close:** Indicates the price at which the last trade occurred at the end of the trading day.
6. **Volume:** The total number of shares traded during the trading day.
7. **UnadjustedVolume:** This might refer to the volume of shares traded without any adjustments for splits or dividends.
8. **Change:** The difference between the current day's close price and the previous day's close price.
9. **ChangePercent:** Represents the percentage change in the stock price from the previous day's close.
10. **VWAP (Volume Weighted Average Price):** This is the average price a security has traded at throughout the day, weighted by volume. It's calculated by dividing the total dollar value of all trades by the total trading volume.
11. **Label:** This could be a label or identifier for the data point, potentially used for categorization or labeling purposes.
12. **ChangeOverTime:** This might represent the cumulative percentage change in the stock price over time, starting from a specific reference point.
